

HIGH-DENSITY STORAGE COLD STORAGE

Cold storage is expensive. Construction costs per sq. ft. for a temperature-controlled facility can be as much as triple the cost of constructing a traditional warehouse, and cold storage warehouses have one of the highest electric energy usage volumes in the commercial building sector. Therefore, maximizing your space and decreasing energy inefficiencies is crucial to save money and increase profits.

Mobile High-Density Storage Systems:

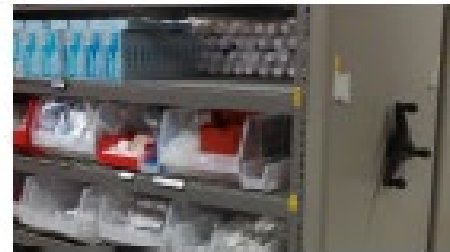

- Create a space where inventory is visible and quickly accessible, reducing retrieval time and increasing energy efficiency.
- Double storage capacity without expensive renovations or off-site storage, which can interrupt productivity.
- Maximize the capacity of the space and help maintain temperatures by reducing the air that escapes when the area is accessed, reducing energy costs.

Optional features:

- Metal crank handle to withstand below freezing temperatures
- Galvanized steel decking and carriage to decrease moisture retention
- Stainless steel tracks and wheels to prevent rust
- Can be configured for use and temperatures down to -25 degrees Fahrenheit

- High-Density Storage
- Shelving and Filing Systems
- Weapon Storage
- Desks and Workstations
- Lockers
- Store And Charge

EXPERIENCE. SERVICE. COMMITMENT.

Since 1976, the National Office Systems (NOS) team of professionals has been providing our clients with the most affordable and comprehensive storage solutions for both their information and space management. NOS develops a total solution to improve efficiency and organization in any environment. We can dramatically reduce your real estate costs and maximize your space allocation. Our solutions will provide you convenience along with security and sustainability, while leveraging your information and governance.
